---

- |                   |              |
|-------------------|--------------|
| • Java            | • HTML5      |
| • Hibernate       | • My-SQL     |
| • Spring MVC      | • CSS3       |
| • Cloud Computing | • Bootstrap  |
| • Python          | • JavaScript |

## Projects

---

### Big-bucket

- This project is used to buy grocery online. This project is created with the help of **Hibernate** and **My-SQL** database, **Bootstrap** and **JavaScript**.
- Using this site user can purchase different types of packaged food, home essentials, snacks etc. without going outside of home.

### Doc Compression

- This project is created with the help of **AWS S3**, **Lambda** and **RDS**.
- Basically this project is useful to decrease the size of any file, image and document.
- When user upload any file at that time Lambda triggers and it decrease the size of file and create the new thumbnail of file and upload it to S3.

### Note-Taker

- I have done this project with the help of **JSP**, **Servlet** and **MY-SQL** database.
- Using this project user can make notes of day to day small tasks.
- In this project user can view their small task any time, insert the notes, update the notes and after completion of that task user can delete it.

## Certifications

---

Machine learning (certificate): Coursera  
Deep Learning and Neural network: Coursera
